Test gcode files

G-code is information, or instructions that 3d printer requires in order to print a 3 dimensional object, it is the langurage of the 3d printer can understand. G Code is generated by your slicing software, by translating a standard 3D modelling file such as an STL file into the code that your specific 3D printer will understand. 📄 **Reference 1** 📄 **Reference 2**

📖 File list

Click the below ⬇️ ICON and click "download" button to download it to your PC, unzip the downloaded ZIP file and then copy the **.gcode** to the SD card.

- ⬇️**xyz_cube**: A simple test gcode file for verifing if the machine is working well.
- ⬇️**1C_dog**: A classic printing quanlity test gcode file, one color.
- ⬇️**1C_vase**: A vase test gcode file, one color.
- ⬇️**Gradient Mixing Vase**: A base gradient mix color test gcode file
- ⬇️**Random Mixing Vase**: A base gradient mix color test gcode file
- ⬇️**M4_4CTest**: A base 4 colors test gcode file
- 📁 **For more multi color test gcode files, please download from here.**
